oplied methodologies oproved methodologies of GCC or DM can be used)	ACM0002 "Gi sources", vers			ion from renewable

GHG Sectoral scopes linked to the applied methodologies	Scope 1 - energy industries (renewable / non-renewable sources)		
Project Verification Criteria: Mandatory requirements to be assessed	 ISO 14064-2, ISO 14064-3 GCC Rules and Requirements Applicable Approved Methodology Applicable Legal requirements /rules of host country National Sustainable Development Criteria (if any) Eligibility of the Project Type Start date of the Project activity Meet applicability conditions in the applied methodology Credible Baseline Additionality Emission Reduction calculations Monitoring Plan No GHG Double Counting Local Stakeholder Consultation Process Global Stakeholder Consultation Process United Nations Sustainable Development Goals (Goal No 13- Climate Change) 		
Project Verification Criteria: Optional requirements to be assessed	 Environmental Safeguards Standard and do-no-harm criteria. Social Safeguards Standard do-no-harm criteria. United Nations Sustainable Development Goals (in additional to SDG 13) CORSIA requirements 		
Project Verifier's Confirmation: The GCC Project Verifier has verified the GCC project activity and therefore confirms the following:	 The GCC Project Verifier Carbon Check (India) Private Limite certifies the following with respect to the GCC Project Activity "Ventos de São Fernando wind power projects in Brazil". ☑ The Project Owner has correctly described the Project Activity including the applicability of the approved methodology [<i>methodology, ACM0002 version 21</i>] and meets the method applicability conditions and is expected to achieve the forecareal measurable and additional GHG emission reduct complies with the monitoring methodology, has appropri conducted local and global stakeholder consultation proceand has calculated emission reductions estimates correctly conservatively. ☑ The Project Activity is likely to generate GHG emis reductions amounting to the estimated 337,034 tCO₂/yearindicated in the PSF, which are additional to the reductions are likely to occur in absence of the Project Activity and complex and complex and complex and complex and complex and complex and the point of the estimated complex and complex and the point of the estimated complex and complex and the point of the estimated complex and complex and the point of the estimated complex and complex and the point of the estimated complex and complex and the point of the estimated complex and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and complex and the point of the project Activity and		

	with all applicable GCC rules, including ISO 14064-2 and ISO 14064-3.
	 The Project Activity is not likely to cause any net-harm to the environment and/or society and complies with the Environmental and Social Safeguards Standard, and is likely to achieve the following labels: Environmental No-net-harm Label (E⁺)
	Social No-net-harm Label (S *)
	The Project Activity is likely to contribute to the achievement of United Nations Sustainable Development Goals (SDGs), complies with the Project Sustainability Standard, and contributes to achieving a total of [4] SDGs, with the following ⁴ SDG certification label (SDG ⁺):
	Bronze SDG Label
	Silver SDG Label
	Gold SDG Label
	Platinum SDG Label
	Diamond SDG Label
	The Project Activity complies with all the applicable GCC rules ⁵ and therefore recommends GCC Program to register the Project activity with above mentioned labels.
	The Project Activity complies with all the applicable requirement of the GCC Program and ICAO's requirements on CORSIA Emissions Unit Eligibility Criteria and CORSIA Eligible Emissions Units, as per Clarification No 1., v1.3 paragraph 23-25, and the ACCs expected to be issued during the crediting period is likely to be CORSIA eligible and can be used by International Airlines for offsetting their emissions during all phases of CORSIA and therefore requests GCC Steering Committee to append CORSIA Certification label (C+) to this project.
Project Verification Report,	Report No: CCIPL1678/GCC/VAL/VWPB/20221207
reference number and date of approval	Version 01
app. 0101	Date: 22/11/2023
Name of the authorised personnel of GCC Project Verifier and his/her signature with date	Vixash L. Sil
	Vikash Kumar Singh, Compliance Officer
	Date: 22/11/2023

⁴ SDG Certification labels: Bronze label (1 star): by achieving 2 out of 17 SDGs; Silver label (2 star): by achieving 3 out of 17 SDGs; Gold label (3 star): by achieving 4 out of 17 SDGs; Platinum label (4 star): by achieving 5 out of 17 SDGs; and Diamond label (5 star): by achieving more than 5 out of 17 SDGs.

⁵ "GCC Rules" are defined in Project Definitions and refers to the rules and requirements set out by the GCC program related to GHG emission reductions and its voluntary certification labels and are available on the GCC Program's public website: <u>https://www.globalcarboncouncil.com/resource-centre.html</u>

1. PROJECT VERIFICATION REPORT

Section A. Executive summary

>>

Kosher Climate India Private Limited has appointed the GCC Project Verifier, Carbon Check (India) Private Ltd., to perform an independent project verification of the Project "Ventos de São Fernando wind power projects in Brazil" (hereafter referred to as "project activity"). This report summarizes the findings of verification of the project, performed based on GCC rules and requirements as well as criteria given to provide for consistent project operations, monitoring, and reporting. This report contains the findings and resolutions from the project verification and a verification opinion. VENTOS DE SÃO FERNANDO I ENERGIA S.A., VENTOS DE SÃO FERNANDO II ENERGIA S.A., VENTOS DE SÃO FERNANDO II ENERGIA S.A. & VENTOS DE SÃO FERNANDO III ENERGIA S.A. has developed and owns the three wind power generation projects in São Bento do Norte - RN, Brazil at three different locations with installed capacities of 76.230 MW, 72.765 MW and 24.255MW each with total project capacity of 173.25 MW respectively in Brazil. The installation of total 50 WTGs has been completed, commissioned and connected to the national Grid of Brazil on 25/12/2020.

Type of Project	Grid connected wind power project
Technology	Wind turbine generators
Connected Grid	Brazilian national grid
Expected Annual Electricity supplied to Grid	728,880 MWh
Expected Annual Emission reduction	337,034 tCO ₂ e
GCC labels applied	Environmental No-net-harm Label (E+), Social No- net-harm Label (S+), CORSIA requirements (C+) and United Nations Sustainable Development Goals (SDG+)
Environmental No-net-harm Label (E+) score	+9
Social No-net-harm Label (S+) score	+8
Number of United Nations Sustainable Development Goals (SDG+) opted	4

The purpose of the project verification is to have a thorough and independent assessment of the proposed Project Activity against the applicable GCC rules and requirements, including those specified in the Project Standard, applied methodology/methodological tools and any other requirements, in particular, the project's baseline, monitoring plan and the host country criteria. These are verified to confirm that the project design, as documented, is sound and reasonable and meets the identified criteria. Verification requirement for all GCC projects activity is necessary to provide assurance to stakeholders of the quality of the Project Activity and its intended generation of Approved Carbon Credits (ACCs).

Location

The Project Activity is located in São Bento do Norte - RN, Brazil.

Scope of the GCC Project Verification

The project verification scope is defined as the independent and objective review of the project submission form (PSF /1/). The PSF /1/ is reviewed against the relevant criteria (see above) and decisions by the GCC, including the CDM approved baseline and monitoring methodology /B02/ and CDM Methodological tool 01 /B04/, tool 07/B05/, tool 24/B07/ and tool 27/B06/. The verification team has, based on the

recommendations in the GCC Project Standard, Version 3.1 /B01-1/ and Project Verification Standard Version 3.1 /B01-2/ employed a rule-based approach, focusing on the identification of significant risks for project implementation and the generation of ACCs.

The verification is not meant to provide any consulting towards the project (owner)s. However, stated requests for clarifications and/or corrective actions may have provided input for improvement of the program design.

While carrying out the verification, CCIPL determines if the PSF complies with the requirements of the applicability conditions of the selected methodology /B02/, guidance issued by the GCC and assess the claims and assumptions made in the PSF /1/ without limitation on the information provided by the project owner.

Verification Process

Strategic risk Analysis and delineation of the GCC Project verification and sampling plan:

CCIPL employed the following GCC Project verification (termed as "Project Verification" as per GCC) process:

- 1. Conflict of interest review at the time of contract review.
- 2. Selection of Audit Team at the time of contract review.
- 3. Kick-off meeting with the client.
- 4. Review of the draft PSF listed on GCC website for public consultation.
- 5. Development of the GCC Project verification plan and sampling plan.
- 6. Desktop review and evaluation of emission reduction calculations.
- 7. Follow-up interaction with the client; and final statement and report development.

The GCC Project verification process has utilized to gain an understanding of the:

- Project's design, GHG emission sources and reductions,
- Baseline determination and additionality,
- GHG monitoring plan,
- Environmental & Social impacts,
- Stakeholder's consultation,
- SD indicators integrated with the project and
- Verify the collection and handling of data, the calculations that lead to the results, and the means for reporting the associated data and results.

Development of the GCC Project verification Plan:

The Audit Team formally documented its GCC Project verification plan as well as determined the datasampling plan. The GCC Project verification plan was developed based on discussion of key elements of the GCC Project verification process during the kick-off meeting and as per the criteria of engagement. The client had the opportunity to comment on key elements of this plan for GCC Project verification. Based on items discussed above and agreed upon with the client in the signed contract, the plan identified the CCIPL audit team members based on following:

- Project level of assurance (which is reasonable as per GCC requirements),
- Materiality threshold and
- Standards of evaluation and reporting for the GCC Project verification.

It also provides an outline of the GCC Project verification process and established project deliverables. This GCC Project verification plan also included a sampling plan, which is designed to evaluate all project elements in areas of high risk of inaccuracy or non-conformance.

The project verification consists of the following four phases:

I. A desk review of the project submission form.

- A review of the data and information.
- Cross checks between information provided in the PSF /01//02/ and information from sources with all necessary means without limitations to the information provided by the project owner.
- II. Follow-up interviews with project stakeholders

Interviews with relevant stakeholders in host country with personnel having knowledge with the project development.

 Cross checking between information provided by interviewed personnel with all necessary means without limitations to the information provided by the project owner.

III. Reference to available information relating to projects or technologies similar projects under verification and review based on the approved methodology /B02/ being applied of the appropriateness of formulae and accuracy of calculations.

IV. The resolution of outstanding issues and the issuance of the final verification report and opinion.

The Verification team confirms the contractual relationship signed on 31/01/2023, between the CCIPL and the Project Owner/42/. The team assigned to the GCC Project verification meets the CCIPL's internal procedures including the GCC requirements for the team composition and competence. The GCC Project verification team has conducted a thorough contract review as per GCC and CCIPL's procedures and requirements.

The report is based on the assessment of the PSF /1/ undertaken through stakeholder consultations, application of standard auditing techniques including but not limited to document reviews and stakeholder interviews, review of the applicable/applied methodology /B02/ and their underlying formulae and calculations.

This report contains the findings (which need to be resolved by the project owner) from the verification and a verification opinion on the proposed Project Activity will be provided once all the raised findings are successfully resolved by the project owner to confirm the program design in the documents is sound and reasonable and meets the stated requirements and identified criteria.

Conclusion

The review of the PSF, supporting documentation and subsequent follow-up actions (onsite audit and interviews) have provided CCIPL with sufficient evidence to determine the fulfilment of stated criteria. CCIPL is of the opinion that the project activity "Ventos de São Fernando wind power projects in Brazil" as described in the final PSF (Version 05, dated 21/11/2023) /1/ meets all relevant requirements of GCC and has correctly applied the CDM baseline and monitoring methodology 'ACM0002: Grid-connected electricity generation from renewable sources' /B02/.

"The project Activity complies with all the applicable requirement of the GCC Program and ICAO's requirements on CORSIA Emissions Unit Eligibility Criteria and CORSIA Eligible Emissions Units, as per Clarification No 1., v1.3 paragraph 23-25, and the ACCs expected to be issued during the crediting period is likely to be CORSIA eligible and can be used by International Airlines for offsetting their emissions during all phases of CORSIA and therefore requests GCC Steering Committee to append CORSIA Certification label (C+) to this project".

The review of the PSF, supporting documentation and subsequent follow-up actions (onsite audit and interviews) have provided CCIPL with sufficient evidence to determine the fulfilment of the voluntary labels E+, S+ /B01-4/ and SDG+ with gold rating /B01-5/. Therefore, the project is being recommended to GCC Steering Committee for request for registration including the applied labels.

Section C. Means of Project Verification

C.1. Desk/document review

>>

The verification was performed primarily as a document review of the initial PSF version 02 dated 15/11/2022 and revised final PSF version 05 dated 21/11/2023/01/. The verification of information provided in the PSF was performed using the source of information provided by the project owner. Additionally, the cross checks were performed for information provided in the PSF using information from sources other than the verification sources, the verification team's sectoral or local expertise and, if necessary, independent background investigations.

List of all documents reviewed or referenced during the verification is provided in Appendix-3

C.2. On-site inspection

	Duration of on-s	ite inspection: 08/0)2/2023

The same was confirmed by cross checking with the project GPS co-ordinates using google earth software and during the onsite visit. The further details such as district and province name of the project location are checked during the physical on-site verification /15/. The GCC project verification team has also cross checked the wind power project activity implementation status with the commissioning certificate /4/ of the project activity and found appropriate.

Parameters	Project Details	Verified documents	
Type of Project	Greenfield wind power project	Commissioning	
Technology	WTGs	certificate /4/ EPE	
Make:	Acciona	document/5/, PPA /9 EPC contract/7/, O&N	
Total Project Capacity	173.25 MW	contract /8/	
Lifetime of the project	25 Years	specification/10/	
Project start date	03/10/2020 (earliest commissioning date)	Commissioning certificate/4/	

The installation of total 50 WTGs of capacity 3.465 MW each, in the three sites have been completed, commissioned, and connected to the national Grid of Brazil through the erected distribution and transmission lines. The same is confirmed from the Onsite visit/15/.

The investment decisions of the project activity were made within a year time. This indicates that all the activities included within the project are located at distinct areas and can apply requirements (such as baseline, additionality, monitoring). The project activity will be collective establishment of baseline, emission reductions calculations, additionality demonstration (including investment and common practice analysis), project monitoring plan and assessment of certification labels have been carried out which is found to be in line with GCC Clarification no 1.

The baseline scenario is that the electricity delivered to the grid by both the project activity would be generated by the operation of grid-connected power plants and by the addition of new generation sources into the grid. The same complies with the applied methodology /B02/. The project is expected to generate and feed GHG free electricity to the connected national electricity grid of Brazil.

As stated in the PSF /1/, the project activity also voluntarily contributes to Environmental No-net-harm Label (E+), Social No net-harm Label (S+) and United Nations Sustainable Development Goals (SDG+).

GCC labels applied	Environmental No-net-harm Label (E+), Social No-net-harm Label (S+), CORSIA requirements (C+) and United Nations Sustainable Development Goals (SDG+)
Environmental No-net-harm Label (E+) score	+9
Social No-net-harm Label (S+) score	+8
Number of United Nations Sustainable	4
Development Goals (SDG+) opted	

The project owner has described the GHG emission-reduction activity, including schematics, specifications and a description of how the project reduces GHG emissions. This is as per $\S36$ of GCC Project Standard Version 03.1 and cross checked with PSF /1/.

The Project Activity is a voluntary action by the project owner as confirmed by the verification team upon review of the PSF /1/ and on-site visit interviews/15/.

 In accordance with §44 of GCC Project Standard (version 03.1) /B01-1/, the verification team has assessed the geographical boundary of the Project Activity, within which it will be implemented, and confirms that geographical boundary of the Project Activity comprises the following boundaries. The wind power plant itself The point of connection to Brazilian national grid for sale of electricity.
This was checked and confirmed by reviewing the PSF /1/, on-site visit interviews with representatives of project owner. /15/
As per the PSF /1/, start date of the Project activity 03/10/2020 (Earliest start date of commercial operation of the Project) /4/. The same is in accordance with requirements of §38 of GCC Project Standard (version 03.1) /B01-1/.
A crediting period is a fixed crediting period for the Project Activity, from 25/12/2020 to 24/12/2030 i.e., of 10 years. This is cross checked by PSF /1/ and conforms the requirement of §39 and §40 of GCC Project Standard Version 03.1 /B01-1/.
CCIPL confirms that the description of the proposed Project Activity in the PSF is accurate and complete, and it provides an understanding of the Project Activity.

D.3. Application and selection of methodologies and standardized baselines

D.3.1 Application of methodology and standardized baselines

Means of Project	Desk review and Interviews				
Verification					
Findings	CL 03 was raised, and details.	finding is close	ed. Please refer	to Appendix 4 fo	or further
Conclusion	The CDM methodology applied is ACM0002, version 21.0 /B02/. It is applicable to greenfield renewable energy power generation using WTGs. The applicability of the methodology could be confirmed by means of interviews with the Project owner representatives, physical site visit and document review. The applied methodology is correctly quoted and is identical to the version available on the UNFCCC website. The applied version of the baseline and monitoring methodology /B02/ is valid at the time of submission of the PSF for global stakeholder consultation. All applicability criteria in the methodology are assessed in the below table:Applicability criteria of the methodology (ACM0002,Justificatio PSF by POGCC Project Verification body assessment

when proposing new methodologies. Project owners may propose alternative methods to demonstrate additionality for consideration by the Executive Board. They may also submit revisions to approved methodologies using the additionality tool.	applied this tool for the demonstration additionality in compliance with the tool. Refer to section B.5 of the PSF for the detailed applicability of this tool and additionality assessment. Hence this tool is applicable	for the demonstration of additionality. The same is detailed in section B.5 of the PSF. Hence the tool is applicable.
Once the additionally tool is included in an approved methodology, its application by project owners using this methodology is mandatory.	In line with the methodology requirement Project developer has applied this tool for the demonstration of additionality assessment. Hence this tool is applicable	Project owner has applied the Tool for the demonstration and assessment of additionality, version 7, which is in line with the methodology ACM0002 Grid- connected electricity generation from renewable sources, version 21.
Applicability criteria of the tool	Justification in the	GCC Project
24, Version 3.1	PSF	Verification body assessment
This methodological tool is applicable to project activities that apply the methodological tool "Tool for the demonstration and assessment of additionality", the methodological tool "Combined tool to identify the baseline scenario and demonstrate additionality", or baseline and monitoring methodologies that use the common practice test for the demonstration of additionality.	Project activity applies "Tool for the demonstration and assessment of additionality". Hence this tool is applicable.	The applicability criterion is met as the project activity applies the methodological tool "Tool for the demonstration and assessment of additionality."
In case the applied approved baseline and monitoring methodology defines approaches for the conduction of the common practice test that are different from those described in this methodological tool, the requirements contained in the methodology shall prevail.	Applied methodology ACM0002 version 21.0 doesn't specify any approach for the demonstration of common practice analysis. As per the methodology the additionality including common practice analysis has been demonstrated as per the Tool 01: Tool for the demonstration	The applied methodology is ACM0002, Version 21. It doesn't define approaches for the conduction of the common practice test that are different from those described in this methodological tool 24 Common Practice Analysis version 3.1.

	and assessment of	
	additionality" version 7.0.0 and Tool 24: Common Practice Analysis version 3.1. Hence Justified.	
Applicability criteria of the tool	Justification in the	GCC Project
Applicability criteria of the tool 27, Version 11	Justification in the PSF	GCCProjectVerificationbodyassessment
This methodological tool is applicable to project activities that apply the methodological tool "Tool for the demonstration and assessment of additionality", the methodological tool "Combined tool to identify the baseline scenario and demonstrate additionality", the guidelines "Non-binding best practice examples to demonstrate additionality for SSC project activities", or baseline and monitoring methodologies that use the investment analysis for the demonstration of additionality and/or the identification of the baseline scenario.	The Project activity applies "Tool for the demonstration and assessment of additionality". Hence this tool is applicable.	The applicability criterion is met as the project activity applies the methodological tool "Tool for the demonstration and assessment of additionality."
In case the applied approved baseline and monitoring methodology contains requirements for the investment analysis that are different from those described in this methodological tool, the requirements contained in the methodology shall prevail.	Applied methodology ACM0002 version 21.0 doesn't specify any approach for the demonstration of Investment analysis. As per the methodology the additionality including investment analysis has been demonstrated as per the Tool 01: Tool for the demonstration and assessment of additionality" version 7.0.0 and Tool 27: Investment Analysis version 12.0. Hence Justified.	The applied methodology is ACM0002, Version 21. It doesn't contain requirements for the investment analysis that are different from those described in this methodological tool 27 Investment Analysis version 11.0.

D.3.2 Clarification on applicability of methodology, tool and/or standardized baseline

Means of Project	Desk Review, Interview
Verification	
Findings	-
Conclusion	NA

D.3.3 Project boundary, sources and GHGs

Means of Project Verification	Desk Review, Interview
Findings	CAR 02 was raised, and finding is closed. Please refer to Appendix 4 for further details.
Conclusion	According to the approved baseline and monitoring methodology "ACM0002" of "Grid connected renewable electricity generation", version 21 /B02/, the project boundary is "the spatial extent of the project boundary includes the project power plant and all power plants connected physically to the electricity system that the CDM project power plant is connected to". The physical boundary of the project activity identified by the project owner has been cross verified by site visit observation /15/, commissioning report for the power plant /4/ and power purchase agreement /9/. In section B.3 of the PSF /01/, project boundary has not been stated in figure 4 and table. Hence, the project boundary includes the wind power plant and the other power plants which connected to the related electricity system and the Brazilian national grid.

D.3.4 Baseline scenario

Means of Project	Desk Review, Interview	
Verification	CAR 04 was raised, and finding is closed. Please refer to Appendix 4 for further	
Findings	details.	
Conclusion	Methodology requirement baseline According to the approved baseline methodology ACM0002 /B-02/, "The baseline scenario is that the electricity delivered to the grid by the project activity would have otherwise been generated by the operation of grid-connected power plants and by the addition of new generation sources into the grid."	Project activity involves generation of

	The relevant national and/or sectoral policies, regulations and circumstances are taken into account during the determination of baseline scenario.	Project Owner has considered all the applicable national and sectoral level policies in demonstrating the regulatory compliance of the project and baseline scenario. National/sectoral policies & regulations:	
		 Law nº 9.427,1996: The National Electric Energy Agency (ANEEL)/33/ Law nº 9.648,1998: The National Electric System Operator (ONS)/34/ Law nº 10.848,2004: Provides for the commercialization of electricity/35/ Decree nº 6.353, 2008: Regulates the contracting of reserve energy through 	
		 auctions/36/ According to all the referred policies and regulations the baseline scenario is in compliance with all applicable legal and regulatory requirements. Also, There are no policies implemented in the host country since adaptation of the Kyoto Protocol (11/12/1997) which give comparative advantage to the renewable energy project activity, and there are no policies in the host country which mandates to 	
		implement a particular technology for the power generation purpose. Hence there is no impact of the E+ and E- policies while demonstrating the baseline scenario of this project activity	
	The baseline scenario has been adequately stated as: The baseline scenario is electricity delivered to the grid by the project activity would have otherwise been generated by the operation of grid-connected power plants and by the addition of new generation sources, as reflected in the combined margin (CM) calculations described in "TOOL07: Tool to calculate the emission factor for an electricity system". The following ex ante parameters and assumptions were used to estimate baseline emissions of the project activity.		
	Combined margin CO ₂ emission factor for the project electricity system in year y $(EF_{grid,CM,y})$ – The value has been calculated and published by Department of Climate Change - Ministry of Natural Resources and Environment, 2020. The value is calculated as per the TOOL 07: "Tool to calculate the emission factor for an electricity system" (Version 07.0). This was found in accordance with the methodology.		
	above during the GCC Project Verified	ta used by the project owners are listed in the	

	 All documentation used /4/ /5/ /9/ /16/ /20/ are relevant for establishing the baseline scenario and correctly quoted and interpreted in the PSF. Relevant national and/or sectoral policies and circumstances are considered and listed in the PSF /1/. The approved baseline methodology ACM0002, version 21, has been correctly applied to identify the most reasonable baseline scenario and the identified baseline scenario reasonably represents what would occur in the absence of the proposed GCC project activity.
--	---

D.3.5 Demonstration of additionality

Means of Project Verification	Desk Review, Interview
Findings	CL 02 and CAR 03 were raised, and finding is closed. Please refer to Appendix 4 for further details.
Conclusion	Project owner has described the Demonstration of additionality according to the GCC Project Standard Version 03.1. In section B.5 of the PSF, two components are applied for the demonstration of additionality.
	 (i) Legal Requirement Test: The project activity is a Type A project and requires undergoing a Legal Requirement Test. The following laws are considered.
	 Law no. 9.427,1996: The National Electric Energy Agency (ANEEL)/33/; Law no. 9.648,1998: The National Electric System Operator (ONS)/34/; Law no. 10.848,2004: Provides for the commercialization of electricity/35/;
	 Decree nº 6.353, 2008: Regulates the contracting of reserve energy through auctions/36/ Law no. 9.074,1995: The Brazilian Electricity Act, does not influence the choice of fuel and technology used for power generation. /37/
	Hence, power generation using renewable energy is not a legal or mandatory requirement.
	However, the projects as in the project activity are not mandated by law or regulations and are entirely a voluntary action. The project complies with paragraph 46 of GCC Project Standard V3.1.
	(ii) Additionality Test: To cover this requirement from the GCC Project Standard 3.1, section 6.4.8, paragraph 45 and as per the applied methodology ACM0002 Version 21.0, additionality of the following project activity is demonstrated and assessed by the latest version of Tool 01: Tool for the demonstration and assessment of additionality" Version 7.0 /B-04/. The project owner has adopted the stepwise approach for demonstrating and assessing the additionality of the project activity as follows:
	Step 1: Identification of alternatives to the project activity consistent with current laws and regulations
	Sub-step 1a: Define alternatives to the project activity: Alternative 1: The proposed project activity undertaken without being registered as a GCC project activity.

Alternative 2: No project activity is undertaken.
The first alternative, which is the implementation of the project without carbon revenue, is not financially attractive as discussed in the investment analysis section below. The second alternative (Scenario 2) is the baseline scenario and implementation of the proposed project as a GCC project activity would be additional to this scenario.
No project activity is undertaken and continuation of current scenario. In this scenario, due to increasing electricity demand new power plants should be constructed which includes mainly thermal power plants (baseline scenario). Implementation of the project is additional to the baseline scenario which is alternative 2 above and therefore reduces the emissions.
Outcome of Step 1a Continuation of the current situation is not considered as a realistic alternative due to increasing electricity demand therefore new power plants should be constructed which includes mainly thermal power plants. Implementation of the project is additional to the baseline scenario which is an alternative 2 above and therefore reduces the emissions.
Sub-step 1b: Consistency with mandatory laws and regulations:
There are no laws or regulations in Brazil issued by The Brazilian federal government, that restrict implementation of wind power project. Further, no law or regulation issued by The Brazilian federal government, which mandates project owner to invest in wind power project.
The National/sectoral policies & regulations are:
 Law nº 9.427,1996: The National Electric Energy Agency (ANEEL)/33/ Law nº 9.648,1998: The National Electric System Operator (ONS)/34/ Law nº 10.848,2004: The legal framework for the commercialization of electric energy. /35/
• Decree nº 6.353, 2008: Regulates the contracting of reserve energy through auctions/36/
The resultant alternatives to the project as outlined in Step 1a are in compliance with the applicable laws and regulations.
Outcome of Step 1b Mandatory legislation and regulations for each alternative are considered in sub-step 1b. Based on the above analysis, the proposed project activity is not the only alternative amongst the project owners that is in compliance with mandatory regulations. Therefore, the proposed GCC project activity is considered as additional.
Step 2: Investment analysis In this section it is demonstrated that the project activity is not financially feasible without the revenue from the sale of ACCs. This is demonstrated in the following sections as per TOOL 27: "Investment analysis" (Version 12.0). No public funding or ODA are associated with the implementation of this GCC project activity.
Sub-step 2a: Determine appropriate analysis method. The project owner has chosen to apply investment analysis to demonstrate the

additionality of the project activity using the benchmark analysis method. Project owner has identified post tax equity IRR as the most suitable financial indicator. The project cannot apply simple cost analysis since the project brings revenue from the sale of electricity; also, investment comparison analysis cannot be applied as the alternative to the project activity is the electricity generated by new and existing grid connected power plants. Sub-step 2b: Option III. Apply benchmark analysis. Post tax equity IRR has been chosen as the financial indicator for the demonstration of financial unviability for the proposed project activity. Since, the PO is demonstrating financial unattractiveness of the project and the project cost involves both equity and debt, post-tax equity IRR is considered to be the appropriate option to indicate financial unattractiveness; and the same is accepted by the verification team.
As per para 15 of Investment analysis/B06/, "The applied benchmark shall be appropriate to the type of IRR calculated. Local commercial lending rates or WACC are appropriate benchmarks for a project IRR. Required/expected returns on equity are appropriate benchmarks for an equity IRR. Benchmarks supplied by relevant national authorities are also appropriate. The DOE shall validate that the benchmarks used are applicable to the project activity and the type of IRR calculation presented."
Further para 16 of the tool 27 states that "In situations where an investment analysis is carried out in nominal terms and the available IRR benchmarks are in real terms, project owners shall convert the real term values of benchmarks to nominal values by adding the inflation rate. The inflation rate shall be obtained from the inflation forecast of the central bank of the host country for the duration of the crediting period. If this information is not available, the target inflation rate of the central bank shall be used. If this information is also not available, then the average forecasted inflation rate for the host country published by the IMF (International Monetary Fund World Economic Outlook) or the World Bank for the next five years after the start of the project activity shall be used". The equity IRR calculated is nominal equity IRR. Accordingly, Project owner converted the default benchmark which is in real terms into nominal terms by using the following equation.
Nominal Benchmark = {(1+Real Benchmark) x (1+Inflation rate)}-1
The GCC Project Verification team referred to the book 'Corporate Finance: Theory and Practice', 2nd edition, by 'Aswath Damodaran' /17/. In page 320 of the book, the same equation is mentioned for converting real into nominal values. Hence the GCC Project Verification team considers the above equation as appropriate for converting real benchmark into nominal benchmark.

Sub-step 2c: Calculation and comparison of financial indicators

For calculation of financial indicator, all relevant costs and revenues were found to be included in the IRR sheet provided by the PO. All assumptions and estimates used for input values were checked against the relevant sources.

GCC project activity has a less favorable Equity IRR than the benchmark, and hence the GCC project activity cannot be considered as financially attractive. The key data parameters used to calculate Equity IRR are tabulated below. These parameters have been sourced from the EPE document and PPA. Input values used in the investment analysis are valid and applicable at the time of the investment decision (signing of the EPC contract).and the Net generation has been sourced from the Technical Qualification Document (for approval to participate in the auction) submitted to EPE (Empresa de Pesquisa Energética) which is a government authorized entity for conducting auctions. Hence, this is in line with the guidelines of EB48, Annex 23.

Project Activity - VSF 1

Parameter Unit Value		Value	Assessment and cross checking		
Capacity of the project	MW	27.3	Verified against EPE Document of 20 March 2018 /5/ , which is prepared by a third party, a government authorized entity for conducting auctions and cross verified against the EPC contract/07/. 22 WTGs of capacity 3.465 MW each are installed at sites, commissioned and connected to the national Grid of Brazil. Further, the same has been confirmed during onsite visit. /15/		

Plant Factor	Load	%	57	Verified against annual net electricity generation mentioned in the EPE Document of 20 March 2018/05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The same is cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein PLF has also subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%.Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.
Annual generation	Net	MWh	136,4 95.1	Verified against annual net electricity generation mentioned in the EPE Document of 20 March 2018/05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The values are cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein net generation has also been subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%. Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.
Tariff		BRL/M Wh	109.7 5	The project verification team has crosschecked with the power purchase agreement signed on 26/06/2018 with CEMIG GERACAO E TRANSMISSAO S.A./9/. The values are cross verified from the actual sales revenue reports/47/. The PO has performed a sensitivity analysis wherein tariff has also been subjected to sensitivity. A variation more than 43% increase in the tariff is required to breach the benchmark value of IRR. Hence, CCPIL confirms that the tariff considered for the project activity is appropriate; hence acceptable.

Operation and Maintenance Cost	BRL Million/ Annum	1.91 70,00 0.00	Project owner has calculated O&M cost per MW as 70,000.00BRL/MW/Annum and O&M cost per annum as 1.91 BRL Million/Annum, with reference to the EPE document of 20 March 2018/05/. Since the project is already commissioned the GCC project verification team has cross checked the actual O&M cost from the O&M contract/8 /. The parameter is also
	BRL/M W/Annu m	0.00	subjected to sensitivity analysis and the same does not cross the benchmark even at -100%. Hence the GCC project verification body found it acceptable.
Escalation in O & M	%	4.00	The project owner has taken the value of Escalation in O & M as 4.00 from Banco Central do Brasil /31/. The GCC project verification team has cross checked the Escalation in O & M rates in Brazil. The same found to be acceptable.
Project cost	BRL Million	137	Verified against EPE Document of 20 March 2018 /05/ which is prepared by a third party, a government authorized entity for conducting auctions, which approved by the Government of Brazil /5/. The same is cross verified against the EPC Contract of 12 April 2019 /07/. Project verification team has subjected project cost in the sensitivity analysis and found that IRR will not cross the benchmark even if the project cost reduced to -43%. The same is out of scope as the project is already commissioned. Hence the project cost considered by PO is found conservative and the same is acceptable.
Debt	%	70	The Project Owner has assumed the debt equity ratio (70:30) at the time of investment decision. The project verification team has checked the impact of the IRR with the project is funded with various ratios viz. 50:50, 70:30, 95:05 etc. and in all scenarios the IRR is not
Equity	%	30	the debt equity ratio considered in the investment analysis is acceptable to the GCC Project Verification team.
Interest Rate	%	7.00	Verified against EPE Document of 20 March 2018/5/ which approved by the Government of Brazil. The project verification team has cross verified the same with data provided by the central bank of Brazil /24/. As per the report the interest rate provided by Central bank of

			Brazil is 7.00%. Hence, the value used for the financial analysis is acceptable to the project verification team.
TUST Charges	BRL/k W/mont h	5.90	In Brazil, electricity producers using renewable sources receive a 50% discount in the Tariff for the Use of the Transmission System - TUST fee (from the Portuguese Tarifa de Uso do Sistema de Transmissão). This discount aims at boosting investments in renewable energy projects and shall be considered as a Type Policy as defined by Annex 3, EB 22. The TUST cost has been taken into
			account based on the previous years (FY 2010-2011) to determine the conservative cost of TUST within the state with comparable project activity/23/.
TFSEE (Electric Energy Services Inspection Fee)	BRL/m onth	0.4	According to Article 29, the inspection fee must be established at 0.4% of the annual economic gain received by the concessionaire, holder of the permit, or other designated person/25/.
Debt Repayment tenure	Year	15	The PO has taken the values from Internal Assumption. However, the GCC
Moratorium	Year	1	verification team has cross checked with the loan sanction agreement. /41/ And the values found to be applicable.
Depreciation Rate	%	10	Project owner has sourced the value as mentioned from the Worldwide Capital and Fixed Assets Guide 2018 /29/ and found to be correct, which was applicable at the time of investment decision.
Income tax rate (IRPJ)	%	34.00	The Income tax rate is cross checked from the prevailing tax /26/ rates and found to be correct, which was applicable at the time of investment decision. The GCC verification body has cross checked the same from the Worldwide Capital and Fixed Assets Guide 2018 /29/ which is in the investment decision date. As per the Brazilian accounting practice, the value is conservative and found to be appropriate.
VAT on O&M	%	18.00	The tax rate is cross checked from the prevailing tax rates and from the "Brazil -

			Indirect Tax Guide - KPMG Global"/29/. It is found to be correct which was applicable at the time of investment decision.
Salvage Value	BRL Million	13.71	Project owner has calculated the value which is 13.71 BRL Million. As per the Brazilian accounting practice, 100% of the asset value can be depreciated over the 10 years period. And this is conservative and found to be appropriate.
Project Activity - V	SF 2		
Parameter	Unit	Value	Assessment and cross checking
Capacity of the project	MW	69.3	Verified against EPE Document of 20 March 2018 /5/, which is prepared by a third party, a government authorized entity for conducting auctions and cross verified against the EPC contract/07/. 21 WTGs of capacity 3.465 MW each are installed at sites, commissioned and connected to the national Grid of Brazil. Further, the same has been confirmed during onsite visit. /15/
Plant Load Factor	%	47	Verified against annual net electricity generation mentioned in the EPE Document of 20 March 2018/05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The same is cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein PLF has also subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%.Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.

Annual Net generation	MWh	285,1 70.9	Verified against annual net electricity generation mentioned in the EPE Document of 20 March 2018/05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The values are cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein net generation has also been subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%. Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.
Tariff	BRL/M Wh	93.33	The project verification team has crosschecked with the power purchase agreement signed on 26/06/2018 with CEMIG GERACAO E TRANSMISSAO S.A./9/. The values are cross verified from the actual sales revenue reports/47/. The PO has performed a sensitivity analysis wherein tariff has also been subjected to sensitivity. A variation more than 43% increase in the tariff is required to breach the benchmark value of IRR. Hence, CCPIL confirms that the tariff considered for the project activity is appropriate; hence acceptable.
Operation and Maintenance Cost	BRL Million/ Annum	9.01	Project owner has calculated O&M cost per MW as 130,000 BRL/MW/Annum and O&M cost per annum as 9.01 BRL Million/Annum, with reference to the EPE document of 20 March 2018/05/. Since the project is already commissioned the GCC project verification team has cross
	BRL/M W/Annu m	130,0 00	checked the actual O&M cost from the O&M contract/8 /. The parameter is also subjected to sensitivity analysis and the same does not cross the benchmark even at -100%. Hence the GCC project verification body found it acceptable.
Escalation in O & M	%	4.00	The project owner has taken the value of Escalation in O & M as 4.00 from Banco Central do Brasil /31/. The GCC project verification team has cross checked the Escalation in O & M rates in Brazil. The same found to be acceptable.

Project cost	BRL Million	347	Verified against EPE Document of 20 March 2018 /05/ which is prepared by a third party, a government authorized entity for conducting auctions, which approved by the Government of Brazil /5/. The same is cross verified against the EPC Contract of 12 April 2019 /07/. Project verification team has subjected project cost in the sensitivity analysis and found that IRR will not cross the benchmark even if the project cost reduced to -43%. The same is out of scope as the project is already commissioned. Hence the project cost considered by PO is found conservative and the same is acceptable.
Debt	%	70	The Project Owner has assumed the debt equity ratio (70:30) at the time of investment decision. The project verification team has checked the impact of the IRR with the project is funded with various ratios viz. 50:50, 70:30, 95:05 etc.
Equity	%	30	and in all scenarios the IRR is not crossing the benchmark value. Hence, the debt equity ratio considered in the investment analysis is acceptable to the GCC Project Verification team.
Interest Rate	%	7.00	Verified against EPE Document of 20 March 2018/5/ which approved by the Government of Brazil. The project verification team has cross verified the same with data provided by the central bank of Brazil /24/. As per the report the interest rate provided by Central bank of Brazil is 7.00%. Hence, the value used for the financial analysis is acceptable to the project verification team.
TUST Charges	BRL/k W/mont h	5.90	In Brazil, electricity producers using renewable sources receive a 50% discount in the Tariff for the Use of the Transmission System - TUST fee (from the Portuguese Tarifa de Uso do Sistema de Transmissão). This discount aims at boosting investments in renewable energy projects and shall be considered as a Type Policy as defined by Annex 3, EB 22. The TUST cost has been taken into account based on the previous years (FY 2010-2011) to determine the conservative cost of TUST within the state with comparable project activity/23/.

		-	
TFSEE (Electric Energy Services Inspection Fee)	BRL/m onth	0.4	According to Article 29, the inspection fee must be established at 0.4% of the annual economic gain received by the concessionaire, holder of the permit, or other designated person./25/
Debt Repayment tenure	Year	15	The PO has taken the values from Internal Assumption. However, the GCC
Moratorium	Year	1	verification team has cross checked with the loan sanction agreement. /41/ And the values found to be applicable.
Depreciation Rate	%	10	Project owner has sourced the value as mentioned from the Worldwide Capital and Fixed Assets Guide 2018 /29/ and found to be correct, which was applicable at the time of investment decision.
Income tax rate (IRPJ)	%	34.00	The Income tax rate is cross checked from the prevailing tax /26/ rates and found to be correct, which was applicable at the time of investment decision. The GCC verification body has cross checked the same from the Worldwide Capital and Fixed Assets Guide 2018 /29/ which is in the investment decision date. As per the Brazilian accounting practice, the value is conservative and found to be appropriate.
VAT on O&M	%	18.00	The tax rate is cross checked from the prevailing tax rates and from the "Brazil - Indirect Tax Guide - KPMG Global"/29/. It is found to be correct which was applicable at the time of investment decision.
Salvage Value	BRL Million	34.65	Project owner has calculated the value which is 34.65 BRL Million. As per the Brazilian accounting practice, 100% of the asset value can be depreciated over the 10 years period. And this is conservative and found to be appropriate.
	<u> </u>		
Project Activity - V			
Parameter	Unit	Value	Assessment and cross checking
Capacity of the project	MW	24.25 5	Verified against Descriptive Memorial of 25 June 2018 /5/, which is prepared by a third party, a government authorized entity for conducting auctions and cross verified against the EPC contract/07/. 7 WTGs of capacity 3.465 MW each are

			installed at sites, commissioned and connected to the national Grid of Brazil. Further, the same has been confirmed during onsite visit. /15/
Plant Load Factor	%	46	Verified against annual net electricity generation mentioned in the Descriptive Memorial of 25 June 2018 /05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The same is cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein PLF has also subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%.Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.
Annual Net generation	MWh	98,01 0.0	Verified against annual net electricity generation mentioned in the Descriptive Memorial of 25 June 2018 /05/ which is prepared by a third party, a government authorized entity for conducting auctions, for the project which is approved by the Government of Brazil /5/. The values are cross verified from the actual electricity generation reports/18/. The PO has performed a sensitivity analysis wherein net generation has also been subjected to sensitivity. The IRR breaches the benchmark value at a PLF variation of more than 43%. Hence, CCPIL confirms that the PLF considered for the project activity is appropriate; hence acceptable.
Tariff	BRL/M Wh	293.4 4	The project verification team has crosschecked with the power purchase agreement signed on 26/06/2018 with CEMIG GERACAO E TRANSMISSAO S.A./9/. The values are cross verified from the actual sales revenue reports/47/. The PO has performed a sensitivity analysis wherein tariff has also been subjected to sensitivity. A variation more than 43% increase in the tariff is required to breach the benchmark value of IRR. Hence, CCPIL confirms that the tariff considered for the project activity is appropriate; hence acceptable.

 1			
Operation and Maintenance Cost	BRL Million/ Annum	3.15	Project owner has calculated O&M cost per MW as 130,000 BRL/MW/Annum and O&M cost per annum as 9.44 BRL Million/Annum, with reference to the Descriptive Memorial of 25 June 2018 /05/. Since the project is already commissioned the GCC project
	BRL/M W/Annu m	130,0 00.00	verification team has cross checked the actual O&M cost from the O&M contract /8/. The parameter is also subjected to sensitivity analysis and the same does not cross the benchmark even at -100%. Hence the GCC project verification body found it acceptable.
Escalation in O & M	%	4.00	The project owner has taken the value of Escalation in O & M as 4.00 from Banco Central do Brasil /31/. The GCC project verification team has cross checked the Escalation in O & M rates in Brazil. The same found to be acceptable.
Project cost	BRL Million	121.2 7	Verified against Descriptive Memorial of 25 June 2018 /05/ which is prepared by a third party, a government authorized entity for conducting auctions, which approved by the Government of Brazil /5/. The same is cross verified against the EPC Contract of 12 April 2019 /07/. Project verification team has subjected project cost in the sensitivity analysis and found that IRR will not cross the benchmark even if the project cost reduced to -43%. The same is out of scope as the project is already commissioned. Hence the project cost considered by PO is found conservative and the same is acceptable.
Debt	%	70	The Project Owner has assumed the debt equity ratio (70:30) at the time of investment decision. The project verification team has checked the impact of the IRR with the project is funded with various ratios viz. 50:50, 70:30, 95:05 etc.
Equity	%	30	and in all scenarios the IRR is not crossing the benchmark value. Hence, the debt equity ratio considered in the investment analysis is acceptable to the GCC Project Verification team.
Interest Rate	%	7.00	Verified against Descriptive Memorial of 25 June 2018 /5/ which approved by the Government of Brazil. The project verification team has cross verified the same with data provided by the central bank of Brazil /24/. As per the report the interest rate provided by Central bank of

	•	1	
			Brazil is 7.00%. Hence, the value used for the financial analysis is acceptable to the project verification team.
TUST Charges	BRL/k W/mont h	5.90	In Brazil, electricity producers using renewable sources receive a 50% discount in the Tariff for the Use of the Transmission System - TUST fee (from the Portuguese Tarifa de Uso do Sistema de Transmissão). This discount aims at boosting investments in renewable energy projects and shall be considered as a Type Policy as defined by Annex 3, EB 22. The TUST cost has been taken into account based on the previous years (FY 2010-2011) to determine the conservative cost of TUST within the state with comparable project activity/23/.
TFSEE (Electric Energy Services Inspection Fee)	BRL/m onth	0.4	According to Article 29, the inspection fee must be established at 0.4% of the annual economic gain received by the concessionaire, holder of the permit, or other designated person./25/
Debt Repayment tenure	Year	15	The PO has taken the values from Internal Assumption. However, the GCC
Moratorium	Year	1	verification team has cross checked with the loan sanction agreement. /41/ And the values found to be applicable.
Depreciation Rate	%	10	Project owner has sourced the value as mentioned from the Worldwide Capital and Fixed Assets Guide 2018 /41/ and found to be correct, which was applicable at the time of investment decision.
Income tax rate (IRPJ)	%	34.00	The Income tax rate is cross checked from the prevailing tax /26/ rates and found to be correct, which was applicable at the time of investment decision. The GCC verification body has cross checked the same from the Worldwide Capital and Fixed Assets Guide 2018 /29/ which is in the investment decision date. As per the Brazilian accounting practice, the value is conservative and found to be appropriate.
VAT on O&M	%	18.00	The tax rate is cross checked from the prevailing tax rates and from the "Brazil -

Revenue) PIS COFINS Social Contribution	n CSLL (%)	:	8.00%	%	tent/dam/ey-sites/ey- com/en_gl/topics/tax/gui

The equity IRR calculations were provided in a spreadsheet /03/. The calculation was verified and found to be correct by CCIPL project verification team; as well as the assumptions used in the calculation were deemed to be correct. The post-tax equity IRR without GCC carbon credit revenues is 7.01% which confirms that the proposed project activity in absence of the GCC carbon credit benefits and compared to the benchmark return on equity 14.97% is not financially attractive.

Sub-step 2d: Sensitivity analysis

A sensitivity analysis has been carried out for parameters contributing more than 20% revenues and costs, to demonstrate the robustness of the financial analysis. The parameters for which sensitivity analysis was done are annual power generation (PLF), change in tariff, project costs, operational and maintenance cost, Sensitivity analysis was conducted for $\pm 10\%$ variation. Reasonable variations for these parameters were checked by calculating the variation necessary to reach the benchmark and then discussing the likelihood for that to happen.

Variati on %	- 10%	Nor mal	10%	Variatio n required to reach benchm ark	Value require d to reach benchm ark (VSF-1)	Value require d to reach bench mark (VSF-2)	Value require d to reach bench mark (VSF-3)
Tariff	5.68 %	7.01 %	8.47 %	43.93%	157.96	134.32	422.35
Net Genera tion	5.68 %	7.01 %	8.47 %	43.93%	196,457	410,446	141,065

Project	7.87	7.01	6.35				
Cost	%	%	%	-43.62%	77	195	68
O&M	7.91	7.01	6.05	NA			
Cost	%	%	%	NA	NA	NA	NA

The results of sensitivity analysis /03/ show that even with a variation of $\pm 10\%$ in tariff, Net power generation, project cost, and O&M cost, equity IRR is significantly lower than the benchmark. And it is evident from the results given above; the project remains additional even under the most favorable conditions. Major input values have been cross checked with the actual values and hence each input value breaching the benchmark is unlikely.

It is verified that the benchmark is reached if:

1. PLF has increased above 43.93%.

PLF considered by the project owner from the EPE Document prepared by the third party, which is approved by the Federal Government of Brazil /05/ is appropriate. The project activity will cross the benchmark only with an increase in PLF by 43.93%. The GCC project verification team has cross checked the actual generation for the period of one year and found that the estimated PLF is appropriate. A further increase of PLF is not found to be a realistic scenario.

2. Tariff rate is increased by 43.93%

The Tariff rate of electricity used for investment analysis i.e., 109.75 BRL/MWh (VSF 1), 93.33 BRL/MWh (VSF 2) and 293.44BRL/MWh (VSF 3) is sourced for the EPE Document (VSF 1 and VSF 2) and CCEE document (VSF 3) /5/ applicable at the time of investment decision. Furthermore, the project will breach the benchmark value at a tariff variation of 43.93% only. As per the PPA the tariff is fixed and there are not any chances for 20 years. Hence, it's highly unlikely that tariff rate will increase above breaching value.

3. Project Cost is reduced by 43.62%

The project cost considered for investment analysis i.e., 137 BRL Million (VSF 1), 347 BRL/MWh (VSF 2) and BRL/MWh (VSF 3). The cost is sourced from EPE Document (VSF 1 and VSF 2) and CCEE document (VSF 3)/5/. A variation of - 43.62% is required for IRR to breach benchmark, which is not possible as the project is already commissioned, and the actual cost is higher than the estimated value. Hence, it's highly unlikely that project cost will decrease below breaching value.

4. Reduction in O&M costs

The O&M agreement is already in place by the project owner. GCC project verification team has cross check the O&M contract and found that the the estimated value is appropriate. The GCC project verification team has checked the IRR of the project activity with the actual O&M cost and found that, with the actual O&M cost the project activity is not crossing the benchmark. Further, it has noticed that even at 100% reduction in O&M cost the project activity is not crossing

Step 3: Barrier Analysis

the benchmark.

The additionality of the project has been demonstrated by applying the investment analysis, thus no barrier analysis is carried out.

Step 4: Common Practice Analysis

The section below provides the analysis as per step 4 of the "Tool for the demonstration and assessment of additionality", version 7.0.0 and according to "Common Practice" Tool version 03.1.

design The pro plants	: Calculate applicable capacity or output range as +/- 50% of the total capacity or output of the proposed project activity: bject installed total capacity is 173.25 MW. Therefore, total capacity of wind will be included in the analysis will be between 86.62 MW to 259.87 MW.
	: Identify similar projects (both CDM and non-CDM) which fulfil all the ng conditions:
a)	The projects are located in the applicable geographical area.
	The project is in Brazil and the applicable geographical area is Brazil. All the projects in the host country Brazil have been chosen for analysis.
b)	The projects apply the same measure as the proposed project activity.
	Renewable Energy through Solar Projects
c)	The projects use the same energy source/fuel and feedstock as the proposed project activity, if a technology switch measure is implemented by the proposed project activity.
	wind power projects
d)	The plants in which the projects are implemented produce goods or services with comparable quality, properties and applications areas (e.g., clinker) as the proposed project plant.
	The project activity produces electricity; therefore, all wind power plants that produce electricity are candidates for similar projects.
e)	The capacity or output of the projects is within the applicable capacity or output range calculated in Step 1.
	Range in between 86.62 MW to 259.87 MW
f)	The projects started commercial operation before the project design document (CDM-PDD) is published for global stakeholder consultation or before the start date of proposed project activity, whichever is earlier for the proposed project activity. The start date i.e., the EPC contract signing date of the project activity is on 12/04/2019. As Kyoto Protocol was ratified by Brazil on 23/08/2002, therefore projects which had started commercial operation between 23/08/2002 to 12/04/2019 have been considered.
MW wi	s no project activity that has capacity range between 86.62 MW to 259.87 thin the commercial operation between 25/09/2002 to 12/04/2019. Hence, ilar project is considered 0.
Numbe	rs of Similar projects identified which fulfill above-mentioned conditions are,

N _{wind} = 0
Step 3: within the projects identified in Step 2, identify those that are neither registered CDM project activities, project activities submitted for registration, nor project activities undergoing GCC Project Verification. Note their number, $N_{\rm all}$.
After excluding the registered, submitted for registration and under validation CDM/VCS/GS/GCC projects the total number of projects, $N_{all} = 0$
Step 4: within similar projects identified in Step 3, identify those that apply technologies that are different to the technology applied in the proposed project activity. Note their number N_{diff} .
Projects with technologies different to technology applied in the proposed project activity were identified as $N_{\text{diff}} = 0$.
Step 5: calculate factor $F= 1 - (N_{diff}/N_{all})$ representing the share of similar projects (penetration rate of the measure/technology) using a measure/technology similar to the measure/technology used in the proposed project activity that deliver the same output or capacity as the proposed project activity.
The factor F was found to be in line with Tool 24 $F = 1 - (N_{diff}/N_{all}) = 1 - (0/0) = 1$ $N_{all} - N_{diff} = 0 - 0 = 0$
The project activity would be common practice, only both of the following conditions apply.
$F > 0.2$ and $N_{all} - N_{diff} > 3$
For the concerned project, $F = 1$ and $N_{all} - N_{diff} = 0$ (Which is less than 3), therefore, the proposed project is not a common practice within the applicable geographical area. Hence, the proposed project is additional.

D.3.6 Estimation of emission reductions or net anthropogenic removal

Means of Project Verification	Desk Review, Interview
Findings	No findings in this section.
Conclusion	Baseline Emission According to ACM0002 methodology, emission reductions related to project activities is estimated as follows: $BE_y = EG_{facility,y} \times EF_{grid,CM,y}$
	Where: BE_y = Baseline emissions in year y (t CO ₂ /yr) $EG_{facility,y}$ = Quantity of net electricity generation supplied by the project plant/unit to the grid in year y (MWh/yr)

	nission factor for grid connected power atest version of "TOOL07: Tool to calculate m" (t CO ₂ e/MWh).
As per para 49 of ACM0002, version 21.0 Greenfield power plant, then:	, when the project activity is installation of
E	$EG_{PJ,y} = EG_{facility, y}$
Where,	
· · ·	ricity generation that is produced and fed esult of the implementation of the project /h/yr)
	iffer between years as explained in A.1, r the crediting period has been calculated ER Sheet, $EG_{facility,y}$ is.
Project	EG _{facility, y} (MWh)
Project Activity 1	345,700
Project Activity 2	285,171
Project Activity 3	98,010
Total	728,880
	uthority (DNA) "Ministry of Science and electricity generation in the National ear 2021 is 0.4624 tCO ₂ /MWh
Therefore, annual baseline emission is ca	Iculated as below:
$BE_{y} = E_{GPJ,y} x \ EF_{grid,CM,y}$	
= 728,880 MWh x 0.4624 tCO2/MWh = 3	37,034 tCO ₂
Project Emissions (PE_y) As the project activity is a wind based po not applicable to the project activity as per	wer generation, the project emissions are r the methodology ACM0002/B02/.
Hence, $PE_y = 0$	
Leakage (LE _y) As per ACM0002 /B02/, no leakage emiss	ions are considered.
Therefore, $LE_y = 0$.	
Emission Reductions Based on the data above, the emission re	duction value for the project activity is:
$ER_{y} = BE_{y} - PE_{y} - LE_{y}$	
ER _y = BE _y =337,034 tCO ₂	

D.3.7 Monitoring plan

Means of Project Verification	Desk Review, Inter	rview			
Findings	for further details.			g is closed. Please refer to Appendix 4	
Conclusion	The approved baseline and monitoring methodology "ACM0002" version 21 /B02/ has been applied. The monitoring plan is in accordance with the monitoring methodology; the monitoring plan will give opportunity for real measurement of achieved emission reductions. CCIPL project verification team has checked all the parameters presented in the monitoring plan against the requirements of the methodology; no deviations relevant to the project activity have been found in the plan.				
	are feasible withir monitoring plan are from the proposed Parameters availa	CCIPL confirms that the monitoring arrangements described in the monitoring plan are feasible within the project design, and the means of implementation of the monitoring plan are sufficient to ensure the emission reductions achieved by/resulting from the proposed GCC project activity can be reported ex post and verified. Parameters available at the time of project verification (ex-ante) (Mention under section B.6.2 of the PSF) are:			
	Parameter	Value	Unit	Assessment	
	Combine Margin CO ₂ emission factor in year y of Brazil Grid (EF grid,CM,y)	0.4624	tCO2/MWh	The value is calculated considering 75% operating margin and 25% build margin as per the "tool to calculate the emission factor for an electricity system" Version 07.0.0 /B05/.	
	Parameters that wi are:	II be monito	ored (ex-post) (Mention under section B.7.1 of the PSF	
	Parameter	Value	Unit	Assessment	
	EG _{facility,y} (Net Electricity generated and delivered to the grid by the power plant in year y)	728,880	MWh	The estimated net electricity generated is given, however, the value for the parameter will be verified through review of monthly meter reading records/18/. There are two meters for the project activity of 0.2s accuracy class (main meter and check meter)/15/. Both are bidirectional meters, installed at the main substations to measure the net exported electricity from the plant. The meter details are provided below	

Project Verification Report

		s verified duri

			The same has been confirmed during the onsite visit /15/. The parameter will contribute to the SDG 7.
Replacing fossil fuels with renewable sources of energy	728,880	MWh	The project activity will result in emission reduction by replacing the fossil fuels with renewable sources of energy. The same will be monitored and confirmed through the monthly generation records/18/.
CO ₂ Emissions	337,034	tCO₂e/year	The project activity will result in emission reduction. The same will be contributing toward the sustainable development goal SDG 13. The parameters will be monitored on a monthly basis. The same will be reported through ER calculation sheet. /02/
Solid Waste Pollution from Hazardous Wastes	At actual record	Count of the wastes (tons/year)	The project activity may generate Hazardous waste during the operation of the project activity. Hazardous waste will be handled according to the national regulations: Law 12.305/2010 (which amends Law 9.605/1998)/19/; the same will be treated and disposed as per the law. Hazardous waste quantity generated and disposed of will be continuously monitored and recorded in the EMP/13/. The same will be issued at the time of verification. The data is provided in the Environmental management plan of Ventos de São Fernando wind power projects in Brazil./13/.
Solid Waste Pollution from E-Wastes	At actual record	Count of the wastes (tons/year)	The project activity may generate E- waste during the operation of the project activity. E-wastes will be handled according to the national regulations: Law 12.305/2010 (which amends Law 9.605/1998)/19/; the same will be treated and disposed as per the law. E wastes quantity generated and disposed of will be continuously monitored and recorded in the Plant logbooks or records annually and the details will be recorded in EMP /13/. The records will be issued at the time of verification. The same is confirmed from the agreement between licensed third-party vendor /20/.

[]	-		
Solid Waste Pollution from end-of-life products/equip ment	At actual record	Count of the wastes (tons/year)	The project activity may generate end-of-life products/equipment during the operation of the project activity. The same will be handled according to the national regulations: Law 12.305/2010 (which amends Law 9.605/1998)/19/; the same will be treated and disposed as per the law. Hazardous waste quantity generated and disposed of will be continuously monitored and recorded in the Plant logbooks or records annually and the details will be recorded in EMP /13/. The same will be issued at the time of verification.
Solid Waste Pollution from batteries	At actual record	(tones/year)	The project activity may generate battery waste at the end of its lifetime during the operation of the project activity. The same will be handled according to the national regulations: Law No. 12305. Brazilian National Policy on Solid Waste (batteries)/19/; the same will be disposed or transferred to recycler as per the law. Battery waste quantity generated and disposed will be continuously monitored and recorded in the Plant logbooks or records annually and the details will be issued at the time of verification.
Noise Pollution	At actual record	Numbers	The project may result in some noise during the construction period and operation period. Project owner during the construction has already ensured no settlements within the 500 m radius from the WTGs. However, Project owner will keep monitor the existence of the any habitat within the permissible limit and also monitors the noise levels during the operation of the project. A grievance record will be maintained at the project site to receive any grievances due to the noise pollution This parameter will be monitored
Shadow Flicker	At actual record	Numbers	In compliance with the host country guidelines, no WTGs are located within the 500m radius from the nearby settlements so that the noise levels have no impact on the settlements. Project owner during the construction has already ensured no settlements within the 500 m radius form the WTGs. Hence no monitoring is required.

		T	
Bird/Bat hits	At actual record	Numbers	Bird collisions might happen during the operation phase of the project. Coloring of blade tips, Insulating the transmission lines and installing bird diverts are done. Monitoring of bird and bat hits around the individual wind turbines are carried out.
Long-term jobs (> 10 year) created	At actual record	Numbers	Project activity will generate long term local employment. This will be an indicator against sustainable development goal SDG 8. The parameter will be verified through employment records/38/.
Avoiding discrimination when hiring people from different race, gender, ethnics, religion, marginalized groups, people with disabilities	At actual record	Numbers	Project activity will not have any discrimination practices while hiring people from different race, gender, ethnics, religion, marginalized groups, people with disabilities. The same will be monitored and verified through HR policy/38/.
Occupational health hazards	At actual record	Numbers	The project activity may have the possibility of Occupational health hazards in project sites during the operation of the project activity. The same will be monitored and verified through employment training records at the time of verification /38/.
Specialized training / education to local personnel	At actual record	Numbers	The project activity will generate on- technical and Non-Technical trainings as per the training needs.to the employees. The same will be monitored and verified through employment training records at the time of verification /38/.
Reducing / increasing accidents/incide nts/fatality	At actual record	Numbers	During the project activity, there is monitoring of occupational health hazards occurred during the project operation and recording the no. of related EHS trainings conducted to mitigate the impact of possible occupational health hazards at the project site. The same will be handled according to the national regulations: Law No. 6,514/1977, known as the Consolidation of Labor Laws (Consolidação das Leis do Trabalho or CLT). /19/; The wastewater will be diverted through the drain system to the drainage. The wastewater generated will be continuously monitored and recorded in Plant logbooks or records annually and the details will be recorded in

Community and rural welfare	At actual record	Numbers	EMP /13/. The same will be issued at the time of verification. The project activity will contribute to the Economic, Environmental, Economical, and social well-being for the community. The same will be monitored and verified through community development records at the time of verification.
Women's empowerment	At actual record	Numbers	The project activity will result in women empowerment. The same will be contributing toward the sustainable development goal SDG 5. The parameter will be monitored on yearly basis.
Exploitation of Child Labor	At actual record	Numbers	The project activity monitors there is no child labor happening during the operation of the project activity. The same will be handled according to the national regulations: Labour Act - 2 Law Decree No. <u>5452/1943</u> . Labor Laws Consolidation./32/; Records are being maintained that avoids the violation of child labor act and archived till the end of the crediting period. The same will be issued at the time of verification.
against the require	ments of the	e monitoring m hat the mon	ked in the project activity and compared ethodology /B02/. It has been confirmed itoring plan, procedures, roles and ed to be feasible.

D.4. Start date, crediting period and duration

Means of Project Verification	Desk Review, Interview
Findings	No findings in this section.
Conclusion	The start date of the project is 03/10/2020, which is the start date of earliest date of the commercial operation of the first project /4/. Crediting period has been chosen as fixed 10 years from 25/12/2020 to 24/12/2030. A crediting period of a maximum length of 10 years has been selected by the project proponent. Therefore, the duration of the crediting period is from 25/12/2020 to 24/12/2030. Technical lifetime for the project activity is 25 years /10/. The project verification team concludes that the duration of the proposed project activity is in conformance with the requirements of §39 and §40 of GCC Project Standard, version 03.1 /B01-1/.

D.5. Environmental impacts

Means of Project Verification	Desk Review, Interview
Findings	No findings in this section.
Conclusion	The project activity has obtained relevant and required environmental approvals and operational licenses prior to the start of the construction of the project activity. Applicable impact assessment studies have been carried out before the construction of the project activity. Project owner has conducted an Environmental and social impact assessment study. The project verification team has confirmed that the Environmental and social impact assessment study was carried out during April 2014. The report concludes that implementation of the wind power project does not have any adverse impacts on the geology, Air quality, Noise quality, Human values, social and economic issues in the project area/06/, /13/, /19/ and /38/.
	and maintenance activities during the project. The verification team also confirm that the project owner has taken all the necessary legal approvals from the government and other parties to implement the project activity.

D.6. Local stakeholder consultation

Means of Project Verification	Desk review and Interviews
Findings	CL 05 have been raised and closed, please refer to Appendix 4 for further details.
Conclusion	It has been indicated in the PSF /1/ that the local stakeholder consultation has been done for the project activity on 28/03/2022 at Dona Marines, Nova Olinda I,São Bento do Norte, Brazil. The meeting announcement was done by putting public notice at project site/nearby village. The same covers meeting location, date, time, and contact information/22/. A summary of comments has been provided by the project owner in the PSF/1/ and it is found that no adverse comment was received for the project activity. This has also been verified by CCIPL project verification team during site visit /15/. Further, the interviews confirmed that there was no adverse comment about the project and this project will lead to employment generation and better environmental conditions. CCIPL considers the local stakeholder consultation carried out adequately and can confirm that the process is in line with the requirements of GCC. /22/

D.7. Approval and Authorization- Host Country Clearance

Means of	•	Desk Review, Interview
Verification		
Findings		No findings in this section.
Conclusion	۱	The verification team confirms that no HC approval is required by the CORSIA labelled project activity, and the HCA will be required during the first or subsequent
		verification.

D.8. Project Owner- Identification and communication

Means of Project Verification	Desk Review, Interview
Findings	CAR 07 was raised, and finding is closed. Please refer to Appendix 4 for further details.
Conclusion

D.9. Global stakeholder consultation

Means of Project Verification	Desk Review, Interview
Findings	No Findings in this section.
Conclusion	The process for global stakeholder consultation was conducted in accordance with the requirements of section 3.2.4 of the Verification Standard (version 03.1) /B01-2/. The PSF was published for global stakeholder consultation from 23/11/2022 – 07/12/ 2022. During the above period no Global stakeholders' comments were received. PSF was published on the GCC website and invited comments by affected parties, stakeholders, and non-governmental organizations from 23/11/2022 – 07/12/ 2022. No comments were received during this period. The verification team confirm that no comments were received during the Global stakeholder consultation. Verification team is of the opinion that the changes in the

PSF during the validation process do not require the publication of the revised PSF for global stakeholder consultation.
--

D.10. Environmental Safeguards (E+)

Means of Project Verification	Desk Review, Interview			
Findings	CAR 08 was raised, and findings are closed. Please refer to Appendix 4 for further details.			
Conclusion	The Project owner has chosen to apply for the Environmental No-net-harm Laber (E+). The assessment of the impact of the project activity on the environmental safeguards has been carried out in section E.1 of the PSF. Out of all the safeguards no risks to the environment due to the project implementation were identified and the following environmental impacts were considered for the project activity.			e environmental the safeguards lentified and the
	Indicators for environmental impacts	Legal Requireme nt Status	Monitoring	Do no harm assessment Evaluation and Score
	Environment – Air; CO ₂ emissions	Brazil's National Policy on Climate Change (PNMC) Law No. 12,187/200 9.	The project is expected to reduce the CO ₂ emission throughout the crediting period/1/ /2/. The parameter will be monitored on monthly basis /1/. Calculation details provided in PSF/1/ and ER sheet/2/. The monitoring approach found acceptable.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
	Environment – Air; Noise Pollution	No mandatory law/regulati on is related to the same.	The project may result in some noise during the construction period and operation period. Project owner during the construction has already ensured no settlements with in the 500 m radius form the WTGs. However, Project owner will keep monitor the existence of the any habitat within the permissible limit and also monitors the noise levels during the operation of the project. A grievance record will be maintained at the project site to receive any grievances due to the noise pollution This parameter will be monitored.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
	Environment – Land; Solid waste Pollution from Hazardous wastes	Law 12.305/201 0 (which amends Law 9.605/1998) /19/	The project activity may generate Hazardous waste during the operation of the project activity. Hazardous waste will be handled according to the national regulations: Law 12.305/2010 (which amends Law 9.605/1998)	Evaluation found Harmless. The same is acceptable to the GCC project

		/19/; All kinds of the solid wastes generated during the project activity will be collected, sorted, stored and disposed to the licensed vendor as per the regulation pertaining to the respective hazardous waste management rules of state and central pollution control board whichever precedes. The same is confirmed from the EIA reports/06/.	verification team. Hence the scoring +1 is acceptable.
Environment – Land; Solid waste Pollution from E-wastes	Law_ 12.305/201 0 (which amends Law_ 9.605/1998) /19/.	The project activity may generate E-waste during the operation of the project activity. E-wastes will be handled according to the national regulations: Law 12.305/2010 (which amends Law 9.605/1998)/19/; All kinds of the E- wastes generated during the project activity will be collected, sorted, stored and disposed to the authorized vendor for the recycling or to dump at the legacy MSW site s as per the regulation pertaining to the respective E- waste management rules of state and central pollution control board whichever precedes. It will be continuously monitored and recorded in the EMP /13/. The same is confirmed from Hazardous waste management Agreement/20/ and EIA reports/06/.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Environment – Land; Solid waste Pollution from Batteries	Law No. 12305. Brazilian National Policy on Solid Waste (batteries) /19/	This project does not have any battery storage facility to store the generated power. However, there are few batteries used to start the inverters and for the standby power to the computers used in the project office at the site. At the end of lifetime, the batteries will be handed over to the recycler or manufacturer to replace with new batteries. Old batteries will not be disposed to the open landfill. Hence the impact is harmless. The same will be handled according to the national regulations: Management of waste and discarded materials, 2015 /19/; Battery waste quantity generated and disposed will be continuously monitored and recorded in the EMP /13/. The	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.

		come is confirmed from and EIA	
		same is confirmed from and EIA reports/06/.	
Environment – Land; Solid waste Pollution from end-of-life products/ equipment	Law 12.305/201 0 (which amends Law 9.605/1998) /19/	The project activity may generate end-of-life products/equipment during the operation of the project activity. The same will be handled according to the Law 12.305/2010. Project Owner will collect, store and dispose the E- waste to the licensed vendors/manufacturers at the end of life of products/equipment's in compliance to the E-waste Management rules. The same is confirmed from Hazardous waste management records/20/ and EIA reports/06/.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Environment – Natural Resources; Replacing fossil fuels with renewable sources of energy	No mandatory law/regulati on is related to the same.	The project activity will replace fossil fuel with the installation of renewable wind energy for the power generation, which would have been otherwise generated by the operation of grid-connected power plants and by the addition of new generation sources,. The same is monitored through the monthly power generation report /18/. The same is confirmed during the onsite visit/15/.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Environment – Natural Resources; Shadow Flicker	No mandatory law/regulati on is related to the same.	In compliance to the host country guidelines, no WTGs are located within the 500m radius from the nearby settlements so that the shadow flickers have no impact on the settlements.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Environment – Natural Resources; Bird/Bat hits	No mandatory law/regulati on is related to the same.	Bird collisions might happen during operation phase of the project. Colouring of blade tips, Insulating the transmission lines and installing bird diverts have been done. Monitoring of bird and bat hits around the individual wind turbines.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
		at the project activity will not cause a for project activity comes out to be +9	

D.11. Social Safeguards (S+)

Means of Project Verification	Desk Review, Interview				
Findings	CL 06 and CA	CL 06 and CAR 08 were raised, and findings are closed. Please refer to Appendix			
		4 for further details.			
Conclusion	The Project owner has chosen to apply for the Social No-net-harm Label (S+). The assessment of the impact of the project activity on the social safeguards has been carried out in section E.2 of the PSF. Out of all the safeguards no risks to the Society due to the project implementation were identified and the following have been indicated as positive impacts. The verification team based on the review of the PSF and the supporting document/15/ confirms that the social impacts mentioned in the section E.2 of the PSF is applicable to the Project activity and the monitoring procedures of the parameters are provided.				
	Indicators for social impacts Long-term jobs (> 1 year) created/	Legal Requirement Status Host country minimal wage requirements	Monitoring The project activity generates long term job opportunities during the operation of the project activity with non-discrimination	Do no harm assessmen t Evaluation and Score Evaluation found Harmless. The same	
	lost	Regulations on Minimum Wage for Employees working by Labor Contract.	policy. The same is monitored and keep records by employment records/38/ and complying host country minimal wage requirements. The monitoring approach found acceptable.	is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.	
	Avoiding discriminati on when hiring people from different race, gender, ethnics, religion, marginalize d groups, people with disabilities.	Organizational internal policy	Project Owner establishes the policy to ensure that there is no discrimination based on gender, racism, religion etc. during the recruitment process. Grievance redressal committee will be formed to address any complaints/ grievance received on discrimination practices.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.	
	Occupation al health hazards	Law No. 6,514/1977, Consolidation of Labor Laws (Consolidação das Leis do Trabalho or CLT).	The project activity may have the possibility of accidents/incidents/near miss in project sites due to human intervention or technical failure or emergency. The same will be monitored and verified through employment training records /38/.	Evaluation found Harmless. The same is acceptable to the GCC project	

			verification team. Hence the scoring +1 is acceptable.
Reducing / increasing accidents/I ncidents/fat ality	Law No. 6,514/1977, Consolidation of Labor Laws (Consolidação das Leis do Trabalho or CLT).	There is a possibility of accidents/incidents/near miss in project sites due to human intervention or technical failure or emergency. The same is prevented by establishing EHS policy guidelines and imparting periodic trainings and providing PPE kits to employees and visitors.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Social - Education	No mandatory law/regulation is related to the same.	The employees will receive on job training as per training needs. It imparts a positive impact by helping employees in all-round development. This will be monitored on annual basis and the details will be recorded.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Women's empowerm ent	No mandatory law/regulation is related to the same.	The project owner has the non- discrimination policy on recruitment and remuneration. (i.e right of equal pay). This ensures there is no discrimination based on gender. This parameter will be monitored through the Employment records.	Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is acceptable.
Community and rural welfare	On-Job Training	The project activity will contribute to the Economic, Environmental, Economical, and social well- being for the community. The same will be monitored and verified through community development records at the time of verification.	Evaluation found Harmless. The same is acceptable to the GCC project

Exploitation of Child labour	Labour Act - 2 Law Decree No. 5452/1943. Labor Laws Consolidation	Project activity provides employment in the region. However, project owner adheres to the The Child Labour (Labour Act - 24 Law Decree No. 5452/1943/32/. Labor Laws Consolidation. ensuring there is no exploitation of child labour. The same will be monitored through employment records and interview with site people and reported annually.	verification team. Hence the scoring +1 is acceptable. Evaluation found Harmless. The same is acceptable to the GCC project verification team. Hence the scoring +1 is
		Act - 24 Law Decree No. 5452/1943/32/. Labor Laws Consolidation. ensuring there is no exploitation of child labour. The same will be monitored through employment records and	acceptable to the GCC project verification team.

D.12. Sustainable development Goals (SDG+)

Means of Project Verification	Desk Review, Interview				
Findings	CAR 08 was raised, and finding is closed. Please refer to Appendix 4 for further details.				
Conclusion	The Project owner has chosen to apply for the United Nations Sustainable Development Goals (S+). The assessment of the impact of the project activity on the SDG's has been carried out in section F of the PSF. The project is expected to contribute 4 SDGs which are SDG 5,7,8 and 13. The verification team confirms that the SDG chose by the project owner is in compliance with the GCC Project sustainability standard V.2.1 and is applicable to the Project activity and the monitoring procedure of each SDG is given in section F and B.7.1 of the PSF.				
	UN- level SDGs	Monitoring	Do no harm assessment Evaluation and Score		

Goal 5. Achieve gender equality and empower all women and girls	Projects are commissioned on 03/10/2020 and thus all policies related to the gender equality and remuneration are in place for implementation. The same is monitored and confirmed from the list of women employees if employed any and organization policy on gender equality and equal remuneration. /38/	Project Owner meets the requirement of UN- level SDG goal. The same is acceptable to the GCC project verification team.
Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all	The project activities that commissioned on 2020 continues to provide clean energy to the global energy mix, thereby complying with the SDG target 7.2. The same is confirmed from the commissioning certificate/04/, PPA/09/ and monitored throughout the technical lifetime of the project activity.	Project Owner meets the requirement of UN- level SDG goal. The same is acceptable to the GCC project verification team.
Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all	The project activity is found to be generating employment opportunities in long term and short term thereby complying to the SDG target 8.5. The same is monitored and confirmed from employment records and HR policy/38/	Project Owner meets the requirement of UN- level SDG goal. The same is acceptable to the GCC project verification team.
Goal 13. Take urgent action to combat climate change and its impacts.	The project activity reduces greenhouse gas annually by 337,034 tCO ₂ meeting the SDG target 13. A. The same is confirmed from the ER sheet/02/ and monthly electricity generation report/18/.	Project Owner meets the requirement of UN- level SDG goal. The same is acceptable to the GCC project verification team.

D.13. Authorization on Double Counting from Host Country (for CORSIA)

Means of Project	Desk review and interview
Verification	
Findings	FAR 01 was raised. Please refer to Appendix 4 for further details.
Conclusion	A declaration under section A.5 of the PSF has been included for offsetting the approved carbon credits (ACCs) for the entire crediting period from 03/10/2020 to 02/10/2030.

The host country attestation is yet to be obtained for authorization on double counting. The project owner has clarified the intent of use of carbon credits for CORSIA hence no double counting will take place.

D.14. CORSIA Eligibility (C+)

Means of Project Verification	Desk review and interview
Findings	CAR 09 was raised, and finding is closed. please refer to Appendix 4 for further details.
Conclusion	 The project activity meets eligible criteria for CORSIA (C+) since the crediting period is after 01/01/2016 and the project is applying for registration under GCC which is one of the approved programmes under CORSIA. The verification team confirms that project activity is also likely to achieve following eligibility requirement: It will reduce a forecasted amount of greenhouse gases, since project activity is the implementation of renewable energy system. Likely to achieve Environmental No-net harm (E+ label) as discussed in section D.10. Likely to achieve Social No-net harm (S+ label) as discussed in section D.11. Likely to achieve SDG+ label with Gold Certification label. The project activity meets the CORSIA eligibility.

Section E. Internal quality control

>>

The Final project verification report prepared by the verification team was reviewed by an independent technical review team to confirm if the internal procedures established and implemented by CCIPL were duly complied with and such opinion/conclusion is reached in an objective manner that complies with the applicable GCC rules/requirements. The technical review team is collectively required to possess the technical expertise of all the technical area/ sectoral scope the project activity relates to. All team members of technical review team were independent of the verification team.

The technical review process may accept or reject the verification opinion or raise additional findings in which case these must be resolved before requesting for registration. The technical review process is recorded in the internal documents of CCIPL, and the additional findings gets included in the report. The final report passed by technical reviewer is approved by the authorized personal of Carbon Check and issued to PO and/or submitted for request for registration, as appropriate on behalf of CCIPL.

Section F. Project Verification opinion

>>

CCIPL was contracted on 31/01/2023 by Kosher Climate India Private Limited for project verification of the project activity "Ventos de São Fernando wind power projects in Brazil". The project verification was performed based on rules and requirements defined by GCC for the project activity.

The project activity is a wind power project, which results in reductions of CO₂e emissions that are real, measurable and give long-term benefits to the mitigation of climate change. It is demonstrated that the project is not a likely baseline scenario and the emission reductions attributable to the project are, hence, additional to any that would occur in the absence of the project activity. The project correctly applies the approved baseline and monitoring ACM0002 "Grid-connected electricity generation from renewable sources", Version 21.0 and is assessed against latest valid PS, VS and Environment and Social Safeguards Standard, Project-Sustainability-Standard and/or other applicable GCC/CDM Decisions/Tools/Guidance/Forms.

The project activity is likely to achieve the anticipated emission reductions stated in the PSF provided the underlying assumptions do not change. The expected emission reductions (annual average) from the project activity are estimated to be 337,034 tCO₂e/year over the 10 years crediting period starting from 25/12/2020.

CCIPL has informed the project owners of the project verification outcome through the draft project verification report and final project verification report. The final project verification report contains the information regarding fulfilment of the requirements for project verification, as appropriate.

CCIPL applied the following verification process and methodology using a competent verification team.

- The desk review of documents and evidence submitted by the project owner in context of the reference GCC rules and guidelines issued,
- Undertaking/conducting site visit, interview, or interactions with the representative of the project owner.
- Reporting audit findings with respect to clarifications and non-conformities and the closure of the findings, as appropriate
- Preparing a draft verification opinion based on the auditing findings and conclusions.
- Technical review of the draft project verification opinion along with other documents as appropriate by an independent competent technical review team.
- Finalization of the project verification opinion (this report)

Carbon Check (India) Private Limited (CCIPL) has verified and hereby certifies that the GCC project activity "Ventos de São Fernando wind power projects in Brazil".

a. Has correctly described the Project Activity in the Project Submission Form including the applicability of the approved methodology ACM0002, version 21.0 and meets the methodology applicability conditions, is additional and is expected to achieve the forecasted real and additional GHG emission reductions, complies with the monitoring methodology, has appropriately conducted local and global stakeholder consultation processes and has calculated emission reduction estimates correctly and conservatively.

b. Is likely to generate GHG emission reductions amounting to the estimated 3,370,343 tCO₂e as indicated in the PSF, which are additional to the reductions that are likely to occur in absence of the Project Activity and complies with all applicable GCC rules, including ISO 14064-2 and ISO 14064-3, and therefore

requests the GCC Program to register the Project Activity.

c. is not likely to cause any net-harm to the environment and/or society and complies with the environmental and Social Safeguards Standard, and therefore requests the GCC Program to register the Project Activity, which is likely to achieve the requirements of the Environmental Nonet-harm Label (E+) and the Social Nonet-harm Label (S+); and

d. is likely to contribute to the achievement of United Nations Sustainability Development Goals (SDGs), comply with the Project Sustainability Standard, and contribute to achieving a total of 4 SDGs, which is likely to achieve the gold SDG certification label (SDG+)

e. is likely to contribute to CORSIA Eligible Emission Units and has CORSIA Label (C+) certification valid till 31 December 2020. A written attestation from the Host country on double counting is not required until 31 December 2020 and the project was found meeting the applicable requirements prescribed by ICAO.

Project Owner's response Date: 05/10/2023					
		f the project is 10	/07/2018 and 15	/08/2018, which is the EPE date (VSF	
1 and VSF document a and applica 1.Actual pro	2) and Descriptive and Descriptive mem ble at the time of the oject cost has been a	memorial date (norial document. investment deci addressed in the s	VSF 3). Input p Input values use sion date. sensitivity analys	arameters are sourced from the EPE and in the investment analysis are valid sis of section B.5 of the PSF. EPE (VSF 1 and VSF 2) and descriptive	
document (VSF 3) and the same	e has been used	in the ER sheet		
B.5 of the F				and the sensitivity analysis of section	

4. The purposed project activity is a wind power plant. Hence, there is no annual degradation in this project activity.

5. The project owner has considered the same tariff rate for VSF 1 and VSF 2 during the auction and won the same tariff rate to for the project activity. VSF 3 tariff has been considered from Price for Settlement of Differences (PLD), which is calculated and published by the CCEE before the investment decision date. The source for depreciation has been provided in IRR spreadsheet and insurances and overheads has been removed.

6. Weblink/references for VAT on O&M, social contribution CSCC are provided in IRR spreadsheet and ONS/CCE has been removed.

The Common Practise Analysis has been addressed in the section B.5 of the PSF.

	CL 03 is closed.						

CL ID	04	Section no.	D.12	Date: 04/05/2023
Description	of CAR			

1. Project owner is requested to justify how sustainable development goals 5 and 9 is applicable to the project activity. Further, PO is requested to justify how the same is in line with the Project Sustainability Standard version 3.1 requirements. Further, PO is requested to provide supportive documents/evidence related to SDG monitoring. 2. Section B.7.2 is not in line with the PSF filling guidelines. PO is requested to clarify the same. Date: 05/10/2023 **Project Owner's response** 1. SDG 5, which focuses on achieving gender equality and empowering women, is relevant to this project activity as there are women involved in the decision-making processes of the company, which is in line with the Project Sustainability Standard. Whereas, SDG 9 does not contribute to the project activity. Hence, it has been removed. 2. Section B.7.2 has been updated and inline with the PSF filling guidelines. **Documentation provided by the Project Owner** HR policy ER sheet SDG 5 Updated PSF. **GCC Emission Reduction Verifier's assessment** Date: 07/10/2023 1. the list of employees provided found appropriate so the finding is closed. 2. The changes made by the PO found acceptable hence the finding is closed.

CL 04 is closed.

DOCUMENT HISTORY

Version	Date	Comment
V 3.1	31/12/2020	 The name of GCC Program's emission units has been changed from "Approved Carbon Reductions" or ACRs to "Approved Carbon Credits" or ACCs.
V 3.0	23/08/2020	 Revised version released on approval by the Steering Committee as per the GCC Program Process; Revised version contains the following changes: Change of name from Global Carbon Trust (GCT) to Global Carbon Council (GCC); Considered and addressed comments raised by the Steering Committee: during physical meeting (SCM 01, dated 29 Oct 2019, Doha Qatar); and electronic consultations EC01-Round 04 (17.08.2020 – 22.08.2020). Feedback from the Technical Advisory Board (TAB) of ICAO on GCC submissions for approval under CORSIA⁷;
V 2.0	25/06/2019	 Revised version released for approval by the GCC Steering Committee. This version contains details and information to be provided, consequent to the latest worldwide developments (e.g., CORSIA EUC).
v1.0	01/11/2016	 Initial version released for approval by the GCC Steering Committee under GCC Program Version 1

⁷See ICAO recommendation for conditional approval of GCC at <u>https://www.icao.int/environmental-protection/CORSIA/Documents/TAB/Excerpt_TAB_Report_Jan_2020_final.pdf</u>
